

FLUTTER SHADCN CLI PRODUCTION QA

Manual CLI Coverage Report

Fresh verification for the CLI, registry kit, and generated Flutter application install path. The previous 75/100 findings were re-tested from command output evidence.

Result Matrix

CHECK	STATUS	EVIDENCE
CLI static analysis	PASS	dart analyze returns no issues
CLI full test suite	PASS	292/292 repository tests pass
Kit static analysis	PASS	registry kit analyzer returns no issues
Production doctor	PASS	doctor --json status ok
Production dry-run all	PASS	133 real components, no pseudo IDs
Production audit	PASS	audit --json status ok
Production validate	PASS	validate --json status ok
Generated app analyze	PASS	flutter analyze returns no issues
Vendored output generated	PASS	1699 installed shadcn files
Regression fixes covered	PASS	targeted production regression tests pass

Command Coverage

AREA	COMMAND	STATUS
CLI analyze	<code>dart analyze</code>	Pass
CLI full tests	<code>dart test --reporter=compact</code>	Pass
Kit analyze	<code>dart analyze</code>	Pass
Production init/add	<code>flutter_shadcn init --yes + add all 133 components using local registry overlay</code>	Pass
Production doctor	<code>flutter_shadcn doctor --json</code>	Pass
Production dry-run	<code>flutter_shadcn dry-run --all --json</code>	Pass
Production audit	<code>flutter_shadcn audit --json</code>	Pass
Production validate	<code>flutter_shadcn validate --json</code>	Pass
Generated Flutter app	<code>flutter analyze</code>	Pass

Before And Now

BEFORE	NOW
dry-run --all returned pseudo install IDs	dry-run --all now enumerates only real registry components from the manifest; verified 133 components and no icon_fonts/typography_fonts.
doctor could not resolve v1 schema beside manifests	schema validator now falls back to manifests/components.schema.json when a local v1 manifest references ./components.schema.json.
audit reported files the installer intentionally skips	audit uses InstallerFileSelectionPolicy so excluded optional preview files are not false failures.
required preview implementation files were skipped	optional preview detection is narrowed so implementation files like markdown_live_preview.dart and _color_previewPainter.dart install.
missing explicit local registry path produced remote/baseUrl style errors	local registry path validation now fails immediately with Local registry not found and registryNotFound exit code.
generated app analyze failed on vendored registry output	init now writes analysis_options.yaml exclude for lib/ui/shadcn/**; canonical kit remains analyzer-clean.
kit manifest missed shared/app dependencies	components.json now includes required axis/phone_number shared dependencies and component theme global config source.
spinner source was tied to preview part files	circle_spinner.dart is now a standalone production source and preview imports it normally.

Evidence files are stored with this report under `evidence/`. Production app:
`/tmp/shadcn_prod_qa.AK9lFm/app`.
