

Interactive CLI QA Report

Date: 2026-05-17

Branch: `branch-v1-interactive-cli-qa`

Fresh Flutter app: `/tmp/flutter\_shadcn\_interactive\_qa.sTBPgm/app`

Real registry root: `/Users/ibrar/Desktop/infinora.nowworkspace/shadcn\_copy\_paste/shadcn\_flutter\_kit/flutter\_shadcn\_kit/lib/registry`

Summary

QA score: 100/100 after the registry metadata fix.

This QA run tested the CLI like a normal user would: `init` was run interactively without `--yes`. The test then installed components, checked generated files, validated the registry, audited installed files, ran dependency checks, and verified the generated Flutter app with `flutter pub get` and `flutter analyze`.

Interactive Init Behavior

Command:

```
```bash
dart bin/shadcn.dart --advanced init --registry-path /tmp/flutter_shadcn_interactive_qa.sTBPgm/source_overlay/registry
```
```

Inputs provided:

- Component install path: Enter, keeping `lib/ui/shadcn`
- Shared files path: Enter, keeping `lib/ui/shadcn/shared`
- Optional font/icon asset groups: Enter, skipping all optional assets
- Theme selection: `999`, then Enter after the CLI rejected the invalid value

Observed behavior:

- The CLI asked for component install path.
- The CLI asked for shared files path.
- The CLI asked whether to install optional font/icon asset groups.
- The CLI listed 42 starter themes.
- Invalid theme input `999` produced an error and re-prompted.
- Pressing Enter skipped theme selection.
- Init copied 48 core shared files and created 3 directories.
- No `assets/` files were created when optional font/icon groups were skipped.

Important init outputs:

- `Install font assets?`
- `Select numbers separated by comma, "a" for all, or Enter to skip:`
- `Theme number or id (Enter to skip): 999`
- `Invalid theme selection "999". Choose 1-42 or press Enter to skip.`
- `Skipping theme selection.`

Component Install Checks

Selected component install commands:

```
```bash
dart bin/shadcn.dart --advanced add button --registry-path <registry>
dart bin/shadcn.dart --advanced add card --registry-path <registry>
dart bin/shadcn.dart --advanced add alert --registry-path <registry>
```
```

Selected install result:

- Component manifests created: `button.json`, `card.json`, `alert.json`
- `shadcn.lock` installed file records checked: 77
- Missing installed files: 0
- Total project files after selected install: 213

All-component install command:

```
```bash
dart bin/shadcn.dart --advanced add <all 133 component ids> --registry-path <registry>
```
```

All-component install result:

- Components installed: 133
- `shadcn.lock` installed file records checked: 1,497
- Missing installed files: 0
- Total project files after all install: 1,921

Issue Found And Fixed

| ID | Before | Fix | After |

| --- | --- | --- | --- |

| INT-QA-01 | `validate --json` reported missing required file dependency

`registry/components/display/markdown/\_impl/state/markdown\_live\_preview.dart`. The source file existed, but registry manifests did not list it as a markdown component file. | Added `markdown\_live\_preview.dart` to both

`/flutter\_shadcn\_kit/lib/registry/components/display/markdown/meta.json` and `/flutter\_shadcn\_kit/lib/registry/manifests/components.json`.

| `validate --json` passes with 1,834 source files checked and no missing dependencies. Full all-component install includes

`markdown\_live\_preview.dart`. |

Verification Evidence

| Gate | Result |

| --- | --- |

| Interactive init without `--yes` | PASS |

| Optional font/icon asset skip | PASS, no `assets/` files after init |

| Invalid theme input re-prompt | PASS |

| Selected install file existence | PASS, 77 checked, 0 missing |

| All component install file existence | PASS, 1,497 checked, 0 missing |

| `deps --all --json` | PASS |

| `validate --json` | PASS, 1,834 source files checked |

| `audit --json` | PASS, 133 installed, no missing files |

| `flutter pub get` | PASS |

| `flutter analyze` | PASS, no issues found |

Evidence Logs

Log root:

- `installed\_file\_check\_selected.json`
- `installed\_file\_check\_all.json`
- `validate\_after\_markdown\_fix.json.log`
- `validate\_after\_all\_json.log`
- `audit\_after\_all\_json.log`
- `deps\_after\_all\_json.log`
- `flutter\_pub\_get\_after\_all.log`
- `flutter\_analyze\_after\_all.log`

Current State

The interactive CLI path is working for the tested production flow. Init does not silently install optional assets when the user skips them, invalid theme choices re-prompt, selected and full component installs produce complete file sets, and the generated Flutter app analyzes cleanly after all components are installed.
