

Flutter Shadcn CLI Full Registry QA

Fresh Flutter project test run against local v1 registry manifests. Includes command logs, failed checks, scoring, and source-quality signals.

dependencies
audited.

AUDIT MISSING

47

Missing
installed files
reported by
audit.

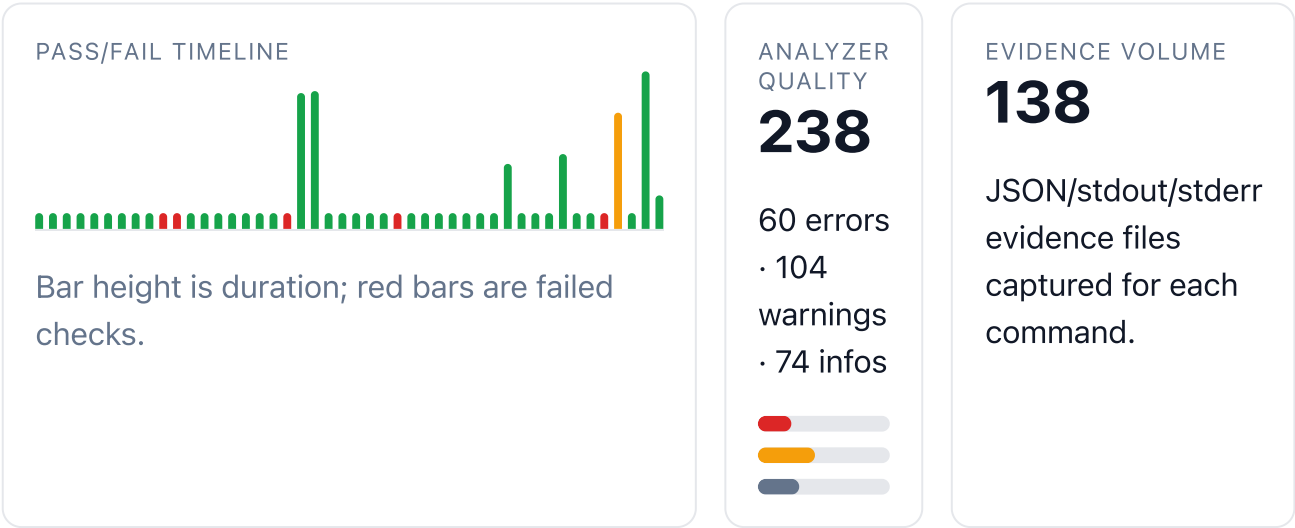

The core install path is substantially healthier than before: init, add, remove, sync, project reset/undo, dependency audit, full component installation, and registry validation passed in a fresh Flutter app. The remaining release blockers are command contract defects in `dry-run --all`, `doctor --json`, and `audit --json`, plus registry source analyzer errors after full install.

Release recommendation: not a clean release candidate yet. Fix the three command defects and the high-impact analyzer missing-type/import errors before marking the v1 CLI/registry pair production-ready.

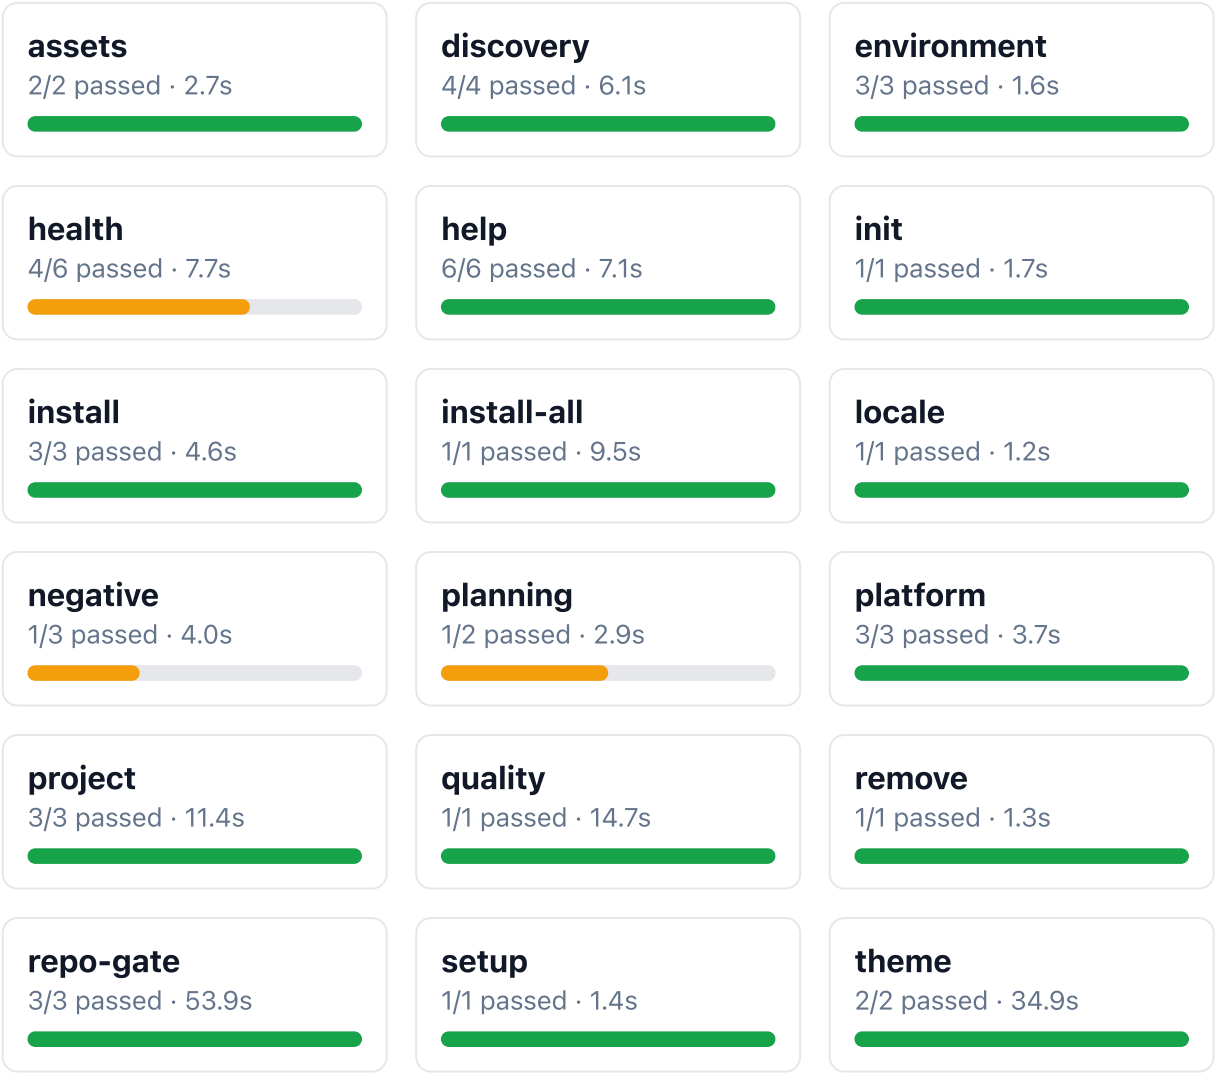

Score Model

Area	Weight	Score	Evidence
Command execution	30%	89.1	41/46 raw pass
Full install	20%	100.0	133 components installed
Health gates	20%	66.7	deps + validate pass; audit fails
Repo gates	15%	100.0	CLI analyze/test and Kit analyze pass
Generated source quality	15%	0.0	60 errors, 104 warnings, 74 infos

Visual QA Dashboard

Category Heatmap

Failures And Findings

Low legacy registry flag rejected

Harness expectation mismatch. The removed `--registry` flag is rejected correctly, but parser returns exit 2 rather than the harness expected 64.

Exit: 2; Expected: [64]; Evidence: `evidence/010_legacy_registry_flag_rejected.*`

```
Error: FormatException: Could not find an option named "--registry".
```

Low missing registry path rejected

Harness expectation mismatch / UX issue. A missing local registry path fails with exit 40 and a remote URL error. It is rejected, but the message is not ideal.

Exit: 40; Expected: [41]; Evidence: `evidence/011_missing_registry_path_rejected.*`

```
Available Components
X Failed to load components: baseUrl must be an absolute URL
Tip: Check the configured registry URL and try again.
```

Medium dry run all json

CLI/registry contract defect. `dry-run --all` exits 30 even though it returns a large plan. It injects missing pseudo IDs `icon_fonts` and `typography_fonts` as component warnings.

Exit: 30; Expected: [0]; Evidence: `evidence/019_dry_run_all_json.*`

```
{
  "status": "ok",
  "command": "dry-run",
  "data": {
    "requested": [
      "icon_fonts",
      "typography_fonts",
      "button",
      "clickable",
      "card",
      "card_image",
      "alert",
      "alpha",
      "chat",
    ]
  }
}
```

High doctor json

CLI schema path defect. `doctor --json` validates against `registry/components.schema.json` instead of the v1 manifest schema path under `manifests/`.

Exit: 20; Expected: [0]; Evidence: evidence/027_doctor_json.*

```
{
  "status": "error",
  "command": "doctor",
  "data": {
    "environment": {
      "script": "/Users/ibrar/.config/superpowers/worktrees/shadcn_flutter_cli/branch-v1-installer-shared-service/bin/shadcn.dart",
      "cwd":
"/private/var/folders/dt/p77q2g1j7190pw1cc_h07hg80000gn/T/flutter_shadcn_pdf_qa.784yj_tl/app",
      "pubCache": "/Users/ibrar/.pub-cache"
    },
    "registry": {
      "mode": "local",
      "root":

```

High audit json full install

Audit/install policy defect. audit expects preview-state files that default add does not install. Full install reports 47 missing files, mostly preview internals.

Exit: 50; Expected: [0]; Evidence: evidence/042_audit_json_full_install.*

```
{
  "status": "error",
  "command": "audit",
  "data": {
    "installed": [
      "accordion",
      "alert",
      "alert_dialog",
      "alpha",
      "app",
      "async",
      "autocomplete",
      "avatar",
      "badge",

```

Deferred Or Non-Destructive Coverage Notes

Area	Reason	Coverage Used
upgrade --force	Would mutate global installed CLI package and may require network.	Help parser + repo test suite.
version --check	Network/update-check behavior is environment dependent.	version command and help boundary.
install-skill real install	Would mutate user skill directories unless isolated separately.	Help boundary + full Dart test suite skill-manager coverage.
feedback submit	Would create/open external feedback URL.	Help/parser boundary.
